

SRI SAIRAM JENA

Business Analyst | AI Automation | Data Analytics | Logistics & Supply Chain

Phone Number : +91-8838307096

Mail Id: sairam.jena001@gmail.com

LinkedIn: www.linkedin.com/in/sri-sairam-jena

Current Location: Cochin, Kerala, India

PROFESSIONAL SUMMARY

Business Analyst with 1+ year of experience in logistics, supply chain, ports, CRM, contract management, billing automation, market research, and data analytics. Experienced in requirement gathering, BRD/FRD preparation, user stories, acceptance criteria, RTM, UAT support, stakeholder coordination, and Agile/SDLC delivery.

Hands-on experience in Power BI, DAX, SQL, Excel, Oracle APEX coordination, CRM systems, Python automation, and GenAI tools including Claude.ai and ChatGPT for prompt engineering, code debugging, testing, documentation, and workflow automation. Delivered automation and analytics initiatives that reduced manual intervention across pipeline tracking, billing workflows, contract extraction, and customer segmentation by approximately 40% to 70%.

CORE SKILLS

- Business Analysis:** Requirement Gathering, Stakeholder Interviews, BRD, FRD, User Stories, Acceptance Criteria, RTM, UAT, Gap Analysis, Impact Analysis, Functional Requirements, Non-Functional Requirements
- Agile & SDLC:** Agile, Scrum, Sprint Planning, Backlog Management, Change Requests, Production Issue Support, Cross-Functional Communication
- Data & Analytics:** SQL, Power BI, Tableau, Advanced Excel, Data Cleaning, Data Mapping, KPI Reporting, Forecasting, Dashboard Development
- Power BI & DAX:** Data Modeling, DAX Measures, Calculated Columns, KPI Dashboards, Report Automation, Business Performance Tracking, Data Visualization
- AI & Automation:** AI Prompt Engineering, Python Automation, GenAI-Assisted Coding, Claude.ai, ChatGPT, Code Debugging, Testing Support, Documentation Automation
- Tools & Platforms:** Oracle APEX, CRM Systems, Power BI, DAX, SQL, Excel, Tableau, Microsoft Visio, Jira, Confluence
- Domain Knowledge:** Ports, Logistics, Supply Chain, CRM, Contract Management, Billing Automation, Customer Segmentation, Grain Trade, Market Research

EDUCATION

Indian Maritime University <i>MBA - International Transportation and Logistics Management</i>	September 2022 - June2024 <i>Tamil Nadu, India</i>
Kalinga Institute of Industrial Technology <i>Bachelor of Technology - Civil Engineering</i>	September 2018 - June2021 <i>Odisha - India</i>

PROFESSIONAL EXPERIENCE

AD Ports Group

Business Analyst

Cochin, Kerala | Oct 2024 – Present

- Prepare BRD, FRD, user stories, acceptance criteria, process flows, functional requirements, non-functional requirements, and UAT support documents.
- Coordinate with IT teams, developers, QA, business stakeholders, and leadership users to clarify requirements, validate logic, support UAT, and deliver business-ready solutions.
- Build dashboards and analytical reports using Power BI, DAX, SQL, and Excel for trade, throughput, customer, contract, and operational KPI visibility.
- Use GenAI tools such as Claude.ai and ChatGPT to support code understanding, debugging, testing, documentation, automation logic, and business workflow prototyping.

KEY PROJECTS – AD PORTS GROUP

1. Pipeline Management & Forecasting Automation – Oracle APEX

Challenge:

- The department was managing contracts, forecasts, and pipeline updates manually, resulting in time-consuming data entry, fragmented tracking, limited visibility, and weak audit readiness.

Action:

- Proposed an automation concept for pipeline tracking, forecasting, and contract visibility.
- Prepared BRD/FRD and coordinated with IT and internal business stakeholders.
- Supported Oracle APEX workflow design, testing, and business validation.
- Coordinated cross-functional communication between IT, business users, and stakeholders to ensure system requirements matched business needs.
- Used GenAI-assisted coding logic to support automation, testing, debugging, and workflow validation.

Result:

- Reduced manual pipeline tracking effort by approximately 40%.
- Improved contract tracking, pipeline visibility, internal communication, and forecast monitoring.
- Strengthened audit readiness through structured workflow and centralized data management.
- Reduced dependency on manual Excel-based updates and improved transparency across the pipeline lifecycle.

2. Customized Contract CRM & Billing Reporting System

Challenge:

- The business required a CRM-based system to manage customized contracts, generate invoice-related outputs, and report billed customers efficiently.

Action:

- Coordinated with IT teams and business stakeholders to define CRM requirements.
- Prepared BRD/FRD and supported SDLC activities from requirement gathering to testing.
- Tested CRM functionality and validated whether the system aligned with business processes.
- Reviewed backend logic with technical teams to understand system functionality and improve process fit.
- Supported UAT by validating billing-related workflows, reporting outputs, and business rules.

Result:

- Reduced manual billing-related intervention by approximately 60%.
- Helped develop a CRM-led contract and billing workflow.
- Improved billing visibility, customer reporting, and process control.
- Supported faster invoice-related reporting and reduced manual dependency.
- Improved alignment between business needs and technical implementation.

5. AI-Based Contract Extraction & Automated Billing Prototype

Challenge:

- Signed contracts required manual review and billing data entry, increasing effort, turnaround time, and risk of errors.

Action:

- Designed an AI-assisted concept to extract billing information from uploaded contract files.
- Applied prompt engineering and Python automation concepts to test contract extraction logic.
- Explored invoice-generation feasibility based on contract terms and structured information.
- Tested extraction of key billing fields such as effective dates, contract terms, rates, area, billing start dates, escalation clauses, and customer details.
- Used GenAI tools to support code logic, debugging, testing, and workflow refinement.

Result:

- Created a practical contract-to-invoice automation approach.
- Reduced potential manual contract review and billing data-entry effort by approximately 60%.
- Supported future automated billing workflow development.
- Improved the feasibility of extracting billing fields directly from signed contracts.
- Helped reduce dependency on manual interpretation of contract clauses.

CERTIFICATION

IABAC Certified Data Analyst

- Completed certification projects in Job Market Analysis and Supply Chain Analysis.
- Applied SQL, Power BI/Tableau, DAX-based KPI logic, dashboarding, analytics, and business insight generation.

CERTIFICATION PROJECTS

1.Job Market Analysis – PRDA-04

IABAC Data Analyst Certification Project

Challenge:

- Organizations needed insights into hiring demand, salary trends, job titles, industries, companies, and required skills across different states.

Action:

- Extracted job market data from the database using provided credentials.
- Analyzed states with the highest number of jobs, average minimum salaries, average maximum salaries, top industries, companies, and job titles.
- Studied salary patterns across regions and job titles.
- Analyzed required skills by job title and company.
- Studied the relationship between average salary and education level.
- Created Power BI/Tableau dashboards using SQL, DAX-based KPI logic, and GenAI-assisted Python scripting.

Result:

- Delivered insights on hiring trends, salary benchmarks, industry demand, and skill requirements.
- Supported workforce planning, hiring strategy, and job market analysis through dashboards.
- Improved visibility into high-demand job roles, companies, industries, and required skill sets.

2.Supply Chain Analysis Dashboard – CDACL-003

IABAC Data Analyst Certification Project

Challenge:

- The company required a diagnostic view of product-wise supply chain performance across inventory, logistics, suppliers, costs, quality, and lead times.

Action:

- Analyzed supply chain data covering product type, SKU, price, availability, sales, revenue, stock levels, lead times, order quantities, shipping time, shipping cost, supplier performance, manufacturing cost, defect rates, transportation mode, routes, and inspection results.
- Built a product-wise supply chain comparison dashboard using Power BI and KPI-based reporting logic.
- Created performance views for inventory, revenue, supplier, shipping, lead time, and defect-related metrics.
- Identified inefficiencies in inventory, logistics, supplier performance, manufacturing, and cost structure.

Result:

- Delivered a diagnostic supply chain report.
- Identified bottlenecks and cost optimization opportunities.
- Improved supply chain visibility through dashboard-driven insights.
- Supported better understanding of supplier, logistics, inventory, and product-level performance.

ADDITIONAL

- SDLC Phases: Requirement Gathering → Design → Development → Testing → UAT
- Agile Exposure: Sprint Planning, Backlog Management, Stand-ups
- Basic Knowledge: API concepts, Data Mapping
